# 1. Application Overview

## 1.1 Pages

The Book Finder Application has two pages

### 1. Home Page

This page consists of 4 main sections

- a. Navigation bar
- b. Search Section
- c. List of books
- d. Footer

### 2. Single Book page

This page shows the details of any single book e.g. description, buy link.

## 1.2 Reusable components

To scale our application, we need to use reusable components across the application. These components can be used in different pages. And multiple times in a single page.

In our application we can have 4 main reusable components they are as follows

### 1.2.1 Navbar

Navbar element should be present in every page so it is good idea to have it as a separate component.

Figure 1. Navbar

### 1.2.2 Footer

Footers on websites should be visible in every page so it can also be a separate component on its own.

Figure 2. Footer

### 1.2.3 Book Card Component

Details of books can be shown in an intuitive way using card design. This component can be reused for different books.

Figure 3. Book Card Component

### 1.2.4 Pagination Component

When searching API returns array of results, we can show it to the user using card design this component can be reused in the project.

## 2. Pages

### 2.1 Home Page

This is the page user lands at first when the user starts using our application.
